OBJECTIVE

Data Analyst with 1+ year of professional experience in SQL, Python, Power BI, Tableau, Advanced Excel, and cloud-based analytics. Experienced in business intelligence, KPI reporting, dashboard development, ETL monitoring, data validation, and reporting automation. Proficient in analyzing large datasets, building data-driven solutions, and collaborating with cross-functional teams to support strategic business decisions. Familiar with Azure Databricks, Google Cloud Platform concepts, and modern data engineering workflows.

PROFESSIONAL EXPERIENCE

Data Analyst, DAAS Labs *September 2025 – July 2026*

- Developed and maintained Python-based automation scripts for data processing, web scraping, metadata extraction, and reporting workflows.
- Used Python and Selenium to automate data collection and metadata extraction from web-based sources.
- Worked with SQL databases and structured datasets for data extraction, transformation, validation, and analysis.
- Supported ETL workflows involving data ingestion, transformation, SQL processing, scheduling, and operational monitoring.
- Worked with enterprise data workflows involving SQL nodes, orchestration processes, access controls, and scheduled jobs.
- Performed data validation and troubleshooting by analyzing job logs, processing failures, and data inconsistencies.
- Worked with Azure Databricks notebooks and jobs in a retail data environment.
- Developed Python/SQL-based solutions for processing and analyzing retail datasets.
- Automated repetitive data and reporting activities to improve operational efficiency.
- Collaborated with technical teams to troubleshoot data processing and application-related issues.
- Documented technical processes, data workflows, and troubleshooting procedures.

Data / Technology Intern, Chrysalis India *January 2025 – June 2025*

- Used Python and SQL for data cleaning, transformation, analysis, and trend identification.
- Worked with Excel and SharePoint datasets to clean, organize, and validate business data.
- Developed a Flask-based dashboard connected to PostgreSQL for presenting data-driven insights.
- Worked with structured datasets and database queries to support internal reporting and analytics.
- Researched AI tools and emerging technologies for internal business and knowledge-management use cases.
- Assisted with data management and documentation activities across internal projects.

EDUCATION

M.Sc. in Computer Science, Central University of Rajasthan *Sept 2023 – May 2025*

B.Sc. in Computer Science, Andhra Loyola College *June 2019 – May 2022*

TECHNICAL SKILLS

Programming: Python, SQL, Object-Oriented Programming, Data Structures & Algorithms

Python & Data: Pandas, NumPy, Data Cleaning, Data Preprocessing, Data Analysis, Selenium

Machine Learning & AI: Machine Learning Fundamentals, Feature Engineering, Model Training & Evaluation, Generative AI, LLM Fundamentals, Prompt Engineering, AI Automation

Web & APIs: Flask, REST APIs, Web Services, API Integration

Databases: SQL, PostgreSQL, SQLite, Relational Databases

Data Engineering: ETL, Data Pipelines, Data Validation, Data Transformation, Data Automation

Cloud & Platforms: Azure, Azure Databricks, GCP, Cloud Data Workflows

Visualization: Power BI, Excel

Development Tools: Git, GitHub, Jupyter Notebook, VS Code

PROJECTS

Stock Market Price Prediction & Analytics Platform

Python | SQL | Machine Learning | Power BI

- Developed an end-to-end stock market analytics pipeline to collect, clean, and process historical stock price data.
- Engineered time-series features such as moving averages, daily returns, and volatility for predictive modeling.
- Built and evaluated machine learning models to forecast next-day stock returns using chronological validation.
- Integrated SQL for data storage and analysis, and developed interactive Power BI dashboards to visualize market trends and prediction performance.
- Implemented data validation and automated data processing workflows to improve pipeline reliability.

Healthcare Readmission Risk Prediction & AI-Powered Analytics

Python | Pandas | NumPy | SQL | Scikit-learn | Streamlit

- Analyzed healthcare encounter data using Python, Pandas, NumPy, and SQL to perform data cleaning, exploratory data analysis (EDA), and feature engineering.
- Developed a machine learning classification pipeline using Scikit-learn to predict 30-day hospital readmission risk.
- Evaluated model performance using precision, recall, F1-score, ROC-AUC, and confusion matrix.
- Created interactive dashboards using Streamlit and explored retrieval-based question answering for AI-powered healthcare insights.
- Applied responsible AI principles, focusing on model interpretability, data quality, and prediction limitations.

PROFESSIONAL ATTRIBUTES

Strong analytical and problem-solving skills

High attention to detail and data accuracy

Structured, process-oriented approach

Effective communication and documentation skills

Proactive learner with interest in AI and data-driven systems
